PREFACE

This Dictionary has been undertaken with the object of putting into the hands of every student of music, in convenient shape, a work in which may be found the meanings, derivations, and pronunciations of the English, Italian, German, and French words used in musical works; also the names, nationality, and dates of birth and death of the leading musicians of the eighteenth and nineteenth centuries.

A feature of especial value is the list of English words with their Italian, German, and French equivalents. The author's design has been to produce a useful work. He has therefore omitted many Greek and Latin terms which are never met with, except in obsolete treatises; the admission of such words would only serve to swell the size of the volume, without, in the least degree, adding to its value.

H. A. CLARKE.

DIRECTIONS FOR PRONUNCIATION.

All Italian, French, and German words are written out phonetically, on the following system :

A as in *far*, represented by *ah*.

The Continental *e* has the sound of *a* in *fare*; it is represented by *eh*.

The Continental *i* has the sound of *e* in *deer*; it is represented by *ee*.

The following vowel sounds have no equivalents in English: French *e*, when not accented, something like the vowel sound in *love*. German *ø* (*o* modified, or *Umlaut*) has nearly the same sound. German *ü* is about half-way between the sound of *o* in *love* and *e* in *deer*. *O* and *u* have the same sound as in English, the *u* sound being represented by *oo*, as in *cool*. Italian *æ* has the sound of long *i* in English. German *ä* is the equivalent of *a* in *air*. German *eu* is sounded like *oi*, as in *toil*.

The following consonantal sounds have no English equivalents: German hard guttural *ach* and soft guttural *ag*. The French sound of *j* is represented by *zh* as nearly as possible. The French nasals *an*, *en*, *in*, *on*, can be represented but very unsatisfactorily in English only by adding a final *g*.

Whenever *ch* is found it is to be sounded like *ch* in *chair*. *C* always has this sound in Italian when followed by *i* or *e*. The Italian *ch*, on the contrary, always has the sound of *k*, or *c* hard, and is thus represented. The Italian *zz* has the sound of *ts* or *ds*, and is thus represented.

With this explanation of the phonetic system adopted to represent the foreign sounds, it is believed that the reader will find no difficulty in acquiring their proper pronunciation.

PRONOUNCING

DICTIONARY OF MUSIC TERMS

A. The 6th of the normal major scale; the 1st of the normal minor scale; the standard by which the orchestra is tuned, given by the oboe.

A battuta (*bat-toot'-ta*). By the beat.

A bene placito (*beh-neh plah-cheel'-to*).

At pleasure, without regard to time.

Alla breve (*breh-veh*). Same as above; also a rhythm of two in the measure, indicated by \textcircled{C} . Alla breve time resembles $\frac{2}{4}$ time in having but one accent in each measure. It was originally written with a breve in the measure, thus:

but as the breve is rarely used in modern music the whole note (semi-breve) is substituted with the direction: *alla breve*, *i. e.*, in the manner of music written with a breve in each measure. The following passage—written (1) *alla breve*, (2) $\frac{4}{4}$, (3) $\frac{2}{4}$ —will exhibit the difference of accent between *alla breve* and $\frac{4}{4}$ and its similarity to $\frac{2}{4}$.

The image shows four measures of music. Measure 1 is in common time (C), with a breve note divided into two half notes. Measures 2 and 3 are in common time (C), with a breve note divided into two half notes. Measure 4 is in common time (C), with a breve note divided into two half notes. This illustrates the comparison between Alla breve and common time.

A or Alla capella (*ah-pehl'-la*). In church style, *i. e.*, either without accompaniment or with the instruments in unison with the voices.

Other accents can be produced at any point by the use of the sign or *sf*. The throwing of the accent on a normally unaccented portion of the bar is called *syncopation*. The simplest form of lyric melody may be thus divided: Motive, two measures; Section, two motives; Phrase, two sections; Sentence, two phrases; Period, two sentences, making sixteen measures in all. The lyric form may be extended indefinitely by the addition of new periods in related keys. One of the most usual is the addition of a new period in the key of the dominant, subdominant, or relative minor, followed by a repetition of the first period. This is called the Aria Form. It was formerly largely used in vocal music, and is now one of the most usual forms for the lighter class of piano music. The following outlines of sonata and rondo forms give their main characteristics. The sonata form is the form of the symphony, and of the trio, quartet, etc., for string instruments, or for piano with strings, or other instruments. The same is the case with the rondo; this form is frequently used for the final movement.

Harmonic Scale. The series of natural harmonics; the scale of all brass instruments without valves or pistons.

Harmonic Stops. Organ-stops with pipes of twice the standard length pierced with a small hole at the middle, causing them to sound the first overtone instead of the sound that the whole length would produce.

Harmonica. (1) An instrument invented by Benjamin Franklin, the sounds of which were produced from glass bowls. (2) An instrument consisting of plates of glass struck by hammers. (3) A mixture-stop in the organ.

Harmonici (Gr.) (*har-mon-i-kee*). The followers of Aristoxenus, as opposed to the *Canonici* (*ka-non-i-kee*), the followers of Pythagoras. The former taught that music was governed by its appeal to the ear, the latter that it was a matter for mathematical and arithmetical study only.

Harmonicon. A toy instrument with free reeds, blown by the mouth.

Harmonics, Overtones, Partial Tones.

(1) The sounds produced by the division of a vibrating body into equal parts; it is upon the presence or absence and relative intensity of the overtones that the quality of the sound depends. Open pipes, strings, brass instruments, and instruments with double reed (bassoon and hautboy) give the following series:—

	1	2	3	4	5	6	7	8	9

omit all the even numbers in this series.

(2) The sounds produced on the violin by touching the string lightly at one of the points of division; those produced by thus touching the open string are called natural harmonics. Artificial harmonics are produced by stopping the string with the first finger and touching it lightly with the fourth, at the interval of a fourth above; the resulting harmonic is two octaves above the stopped note. In writing music this is indicated by writing thus:—

The lozenge-shaped notes indicate the notes to be lightly touched. Natural harmonics are frequently used on the harp, guitar, and mandolin.

Harmonie-Musik (Ger.). Harmony music; music for wind instruments. A band composed of brass and wood instruments is called a harmony band.

Harmonist. One who is an expert in the art of harmony.

Harmonium. A keyboard instrument with free reeds. It differs from the reed organ in that the air is forced through instead of drawn through the reeds, giving a stronger, rougher quality of tone. In harmonium music, published in Europe, the stops are indicated by figures placed in a circle. Each stop is divided at the middle. The figure in circle, placed below the bass staff, refers to the lower half of the stop; above the treble staff, to the upper half. The cor an-glaïs and flute form one stop, marked ①

below for cor anglais, ① above for flute.

2 means bourdon, below; clarinet, above.

Harmony [from Gr., *harmo*, to join]. The art of combining sounds. The study of harmony in its fullest extent is that which treats of the combination of sounds, consonant and dissonant, and their succession. The so-called laws of harmony have all been arrived at empirically, hence have been subject to change, each new composer of sufficient originality and genius modifying them to suit his purposes. Harmonic combinations may be either consonant or dissonant. The consonant combinations consist of the common (perfect) chord and its derivatives. The dissonant combinations all include some dissonant interval, viz., 7th or 2d, augmented 4th, diminished or augmented 5th, augmented 6th or diminished 3d, or 9th. The movement of consonant combinations is perfectly free; that of dissonant combinations is subject to the rules governing the resolution of the dissonant sounds they contain. Two classes of dissonances are recognized: (1) Those that belong to the overtone series, called essential; (2) those that result from the employment of suspensions, retardations, changing and passing notes.

Harp. A string instrument of very ancient origin, probably first suggested by the bow. The earliest forms of Egyptian harps resemble that weapon, the front bar or support being wanting. The modern harp, by means of contrivances for altering the tension of the strings, controlled by pedals, has the complete chromatic scale. The harp is extensively used in the modern orchestra; its clear, "glassy" tones form a striking and effective contrast to the rest of the orchestra. It is most effective when used to give "arpeggios," or broken chords, particularly in the soft passages. Scales are ineffective on the harp, and the chromatic scale is impossible. The compass of the modern harp extends from the second C \flat below the bass staff to

horns sounded by means of a cup-shaped mouth-piece. In modern usage applied only to the orchestral horn, called also French horn. A brass instrument with a long, narrow tube bent into a number of circular curves, with a large bell. The modern horn is provided with pistons, which make it a chromatic instrument. The custom is now almost universal of using the horn in F, the part for which is written a fifth higher than the actual sounds. Before the application of pistons to the horn its part was always written in C, and the key was indicated by writing: Corni in B \flat or E \sharp , etc., as the case might be. Many composers retain this method of writing, but the horn-players generally transpose the part *vista* to suit the F-horn.

Imitando (It.). Imitating; as, Imitando la voce, imitating the voice; a direction to the instrumentalist to imitate the vocalist.

Imitation. A device in counterpoint; a musical phrase being given by one voice is immediately repeated by another voice. There are many varieties of imitation: (1) By augmentation, when the imitating part is in notes of twice or four times the value of those in the theme. (2) By diminution, when the value of the notes is reduced one-half or one-fourth. (3) By inversion, when the intervals are given by the imitating part in inverted order. Imitation is called Canon when the order of letters and intervals is exactly repeated, thus:—

C D E F G A B C

Strict, when the order of letters only is repeated, as:—

C D E F A B C D

Free, when the theme is slightly altered, but not enough to destroy the resemblance. The theme is called the antecedent; the imitation, the consequent. There are other varieties of imitation, but they are now generally obsolete, being more curious than musical.

struments. String instruments are divided into bow instruments, violin class; instruments the strings of which are plucked by the fingers—harp, guitar, etc.; plectral, *i. e.*, the strings struck by a rod or thin strip of wood, metal, etc., as mandolin, zither; strings struck by hammers held in the hand—cymbal; strings struck by hammers operated by keyboard—piano-forte. Wind instruments are divided as follows: (1) Vibrating column of air—flutes and flue-stops of organ. (2) Single reed—clarinet, saxophone, bassett horn, reed-stops in the organ. (3) Double reed—oboe, bassoon. (4) Free reed—harmonium, vocalion, cabinet organ. (5) Brass instruments in which the lip of the player acts as a reed—trumpet, horn, etc. Pulsatile instruments—drums, triangles, cymbals, bells, xylophone. The small or chamber orchestra includes the following instruments: String—first violins, second violins, violas, violoncellos, contrabass. Wood-wind—pair of flutes (It., *fauzi*), pair of hautboys (It., *oboi*), pair of clarinets (It., *clarionetti*), pair of bassoons (It., *fagotti*). Brass-wind—pair of trumpets (sometimes omitted) (It., *clarini*), pair of horns (It., *corni*), pair of kettle-drums (It., *timpani*). The addition of three trombones changes this to the full or grand orchestra, which is often augmented by the addition of the following instruments: Wood-wind—piccolo or octave flute, English horn (It., *corno Inglese*), alto or bass clarinet, double bassoon (It., *contra fagotto*). In the brass quartet the horns are increased to four, and the alto, tenor, and bass trombones are added and the bass trombone reinforced by the bass tuba. Three or more kettle-drums are frequently employed, also the following pulsatile instruments: large drum, snare drum, triangle, and cymbals. The harp has almost become an essential in the modern orchestra, whether large or small.

Intermezzo (It.) (in-ter-medzo). An interlude; a short movement connecting the larger movements of a symphony or sonata.

Interrupted Cadence. See *Cadence*.

Interval. The difference in pitch between two sounds. The name of an interval is determined by the number of letters it includes (counting the one it begins with and the one it ends with). Seconds may be minor (E, F), major (E, F#), augmented (E \sharp , F#). Thirds may be minor (E, G), major (E, G#), diminished (E, G \flat). Fourths may be perfect (E, A), augmented (E, A#), diminished (E, A \flat). The inversion of an interval produces one of the opposite kind except when it is perfect. Inversion of minor 2d produces major 7th, and since all intervals lie within the octave, and the octave contains twelve half-tones, it follows that an interval and its inversion must together make an octave or twelve half-tones. Intervals are further divided into consonant and dissonant, the consonant into perfect and imperfect. The perfect consonances are the 4th, 5th, and octave. They are called perfect because any alteration of them produces a dissonance. The imperfect consonances are the major and minor 3d and 6th, called imperfect because equally consonant whether major or minor. All other intervals are dissonant, that is, one or both the sounds forming them must move in a certain direction to satisfy the ear. If the dissonant is minor or diminished the sounds must approach each other (except minor 2d); if major or augmented they must separate (except major 7th, which may move either way). Intervals are augmented when greater than major or perfect. Intervals are diminished when less than major or perfect. The prime or unison is often called an interval and if altered, as, C \sharp , is called an augmented unison or prime; it is more properly a chromatic semitone. Natural intervals are those found in the major scale. Chromatic intervals are those found in the harmonic minor scale and in chords that include sounds foreign to the scale or key.

Metre or **Meter** [Gr., *metron*, a measure]. Properly belongs to poetry, from whence it is transferred to music. In poetry it has two meanings: (1) As applied to a group of syllables; (2) as applied to the number of these groups in a line. English prosody recognizes four groups of syllables, called feet: (1) The Iambus, consisting of a short or unaccented syllable followed by a long or accented syllable, as, be-fore; (2) the Trochee, which is just the reverse, as, mu-sic; (3) the Anapest, two short followed by a long, as, re-pro-duce; (4) the Dactyl, which is just the reverse, as, fear-ful-ly. As applied to lines (verses), **Long Meter** signifies four iambic feet in every line; **Common Meter** (also called **Ballad Meter**) an alternation of four and three iambic feet; **Short Meter**, two lines of three feet, one of four, and one of three in every stanza. Trochaic, Anapestic, and Dactylic Meters are indicated by figures giving the number of syllables in each line, as 8, 6, 8, 6, etc. It is important to the musician to become thoroughly familiar with prosody, lest he fall into the too common error of setting short syllables to the accented beats of the measure, or the reverse.

It consists of a pendulum with two bobs, one of which is movable, driven by clockwork; back of the movable bob is a graduated scale. It is used as follows: If the metronomic indication at the beginning of a piece of music in $\frac{4}{4}$ time is $J = 100$ ($\frac{1}{4}$ -note equal to 100), the movable bob is slid along the rod until it is opposite the figures 100, the pendulum is set in motion, and one swing—indicated by a sharp click—is allowed to every beat.

the following as the initial notes of the principal modes: Dorian (the standard mode) D, Phrygian E, Lydian F#, Mixolydian G. Those modes the initial notes of which are below the Dorian were distinguished by the prefix *hypo*, beneath, as Hypolydian C#, Hypophrygian B, Hypodorian A. The succession of sounds was like that of the natural scale of A minor. Church (or ecclesiastical), or Gregorian, or Ambrosian modes were derived from the Greek modes, but discarded the chromatic sounds. Thus the Dorian and Phrygian were the same, that is, had the same initial sounds, but the Lydian began on F instead of F#. There are other differences between the Greek and the Church modes, viz.: The first four are called authentic; those the initial notes of which are below the Dorian are called plagal; each plagal mode is considered as the relative of the authentic mode, beginning a 4th above it. The final of a plagal is always made on the initial note of its related authentic mode. If the interpretation of the Greek modes is to be trusted the church modes seem to have arisen from a misunderstanding of the Greek modes.

A passing or transient modulation is one followed by a quick return to the original key; the signature is not changed in a modulation of this kind. Notation. The various signs used to represent music to the eye, as staff, clefs, notes, rests, etc. The earliest attempts at the representation of musical sounds of which we have any knowledge were made by the Greeks, who used the letters of their alphabet, modified in various ways to represent the series of sounds they employed. Their series of sounds is supposed to have begun on the note A, first space in the bass clef. From this system music has retained the name of A for this sound. The next development was the adoption of a series of signs called neumæ. These signs, although curiously complicated, were yet very defective in precision, being inferior to the letters as indications of pitch. The great want, both of the letter system and the neumæ, was that neither gave any indication of the duration of the sounds. The next step was the adoption of the staff. At first use was made only of the spaces between the lines, and, as notes had not yet been invented, the syllables were written in the spaces; this gave exactness to the relative pitch of the sounds but no indication of their duration. The next step was to use the lines only, indicating the sounds by small square notes called points. The letter names of the lines, of which eight was the number, were indicated by Greek letters placed at the beginning. This, though an improvement on the plan of dislocating the syllables, was still wanting in that no duration was indicated. This desideratum was secured by the invention of the notes, attributed to Franco of Cologne. Invention was now on the right track. The expression of pitch and relative duration were now determined with exactness. The system of notation now in use is substantially the same, modified and improved to meet the requirements of modern musical complexity.

Note. A sign which, by its form, indicates the relative duration of a sound, and by its position on the staff the pitch of a sound.

Opera (It.) [from Lat., *opus*, work]. A combination of music and drama in which the music is not merely an incidental, but the predominant element. The opera originated in an attempt to revive what was supposed to be the manner in which the classic Greek drama was performed. The efforts of the group of musical enthusiasts who made this attempt culminated in the production of "Euridice," in 1600, the first Italian opera ever performed in public. The ground being broken, new cultivators soon appeared, and the new plant grew rapidly. Peri, the composer of "Euridice," was succeeded first by Gagliano, then by Monteverde,—one of the great names in music. In his hands the opera developed with extraordinary rapidity. Before the close of the 17th century a host of opera-writers appeared, led by Scarlatti. The next important development in the form of opera was made by Lulli, the court-musician of Louis XIV. No very striking advance was now made until Händel appeared. He did little in the way of developing the form, but infused so much genius into the received form that it gave it a new life. In this respect Händel resembled Mozart, who, at a later stage of the development of the opera, was quite satisfied to take the then received form, which his genius sufficed to make immortal. The first decided departure from the traditional form was made by Gluck, whose theory of dramatic music is strongly akin to the modern theory of Wagner. The opera since Mozart has grown with so much luxuriance, in such a diversity of forms, that even a slight sketch of it would be impossible in our limits. Appended will be found the names of the principal varieties.

Opus (Lat.). Work; used by composers to indicate the order in which their works were written.

Oratorio (It.) [from Lat., *oratorius*, pertaining or belonging to prayer; a place for prayer]. A composition consisting of solos and concerted pieces for voices, the theme of which is taken from the Bible or from sacred history. The name arose from the fact that St. Philip Neri gave discourses intermingled with music in his oratory about the middle of the 16th century. The term *Oratorio* is also used for secular works written on the same plan, such as Haydn's "Seasons," and Bruch's "Odysseus," but is manifestly inappropriate. The *oratorio* is descended from those middle-age dramatic performances founded on biblical or moral themes, known as mysteries, moralities, or miracle plays. It took its rise about the same time as the opera, from which it differs chiefly in that it affords an opportunity for the highest developments of the contrapuntal art, whereas the *opera* is essentially monodic. The *oratorio* has not gone through the manifold changes and diversities that have marked the development of the *opera*, nor has it attracted anything like the number of composers that have devoted themselves to the *opera*. The first writer of any prominence in this field was Carissimi. He was followed by A. Scarlatti; then Händel appeared and stamped for all time the form of the *oratorio*. His great contemporary, Bach, equaled, if he did not surpass him, but in a different style. Händel has had but two successors worthy to be named with him,—Haydn and Mendelssohn, each of whom has stamped a new character on the *oratorio* without descending from the high plane on which this class of composition should stand. The taste for the *oratorio* seems to be on the wane, as no composer of any mark has of late years devoted his attention to it.

Organ, Organo (It.), **Orgue** (Fr.), **Orgel** (Ger.) [from Gr., *organon*, tool, implement, instrument]. An instrument consisting of a large number of pipes grouped according to their pitch and quality of tone into "stops." A large bellows supplies the compressed air or "wind" to the various air-tight boxes called sound-boards, on which the pipes are placed. By means of a key mechanism the "wind" is allowed to enter the pipes corresponding to any given pitch at will. The set or sets of pipes it is desired to sound are controlled by means of "registers" which, when drawn, allow the "wind" to enter the pipes of the "stop," the name of which is marked on the knob of the register. Organs are built with from one to four, and even more, "manuals," or keyboards, placed one above the other. Three manuals is the usual number. The lowest is called the "choir organ," the middle the "great organ," the upper the "swell organ." When a fourth manual is added it is called the "solo manual;" a fifth the "echo organ;" there is also a keyboard for the feet called the "pedal organ."

Pianoforte (It.) (*for'-teh*). In common usage, piano, without the forte. An instrument strung with steel wire (formerly brass wire was largely used), provided with a keyboard; the depression of the keys causes the hammers to strike the strings. The name pianoforte was given to it because the volume of sound was under the control of the performer. Three forms of pianoforte are made: The grand piano [in Fr., *piano à queue*, lit., "piano with a tail";¹³ Ger., *Flügel*, in allusion to its wing shape]; the square, and the upright. The pianoforte is descended from the dulcimer in the same sense that the harpsichord is descended from the psaltery. In form the dulcimer and psaltery were identical, differing only in that the former was played by means of hammers, the latter by means of "plectra." The adaptation of mechanism to control the hammers developed the piano out of the dulcimer, and the adaptation of mechanism to control the "plectra" developed the harpsichord out of the psaltery. The hammer action was first made practically effective by Cristofori of Padua, in 1711. About the same time an English monk, "Father Wood," made one in Rome. This instrument came into the possession of the celebrated Fulke Greville, and became well known as Mr. Greville's pianoforte. In 1717, a German youth of eighteen, named Schröter, invented the pianoforte independently; his invention was copied by Silberman of Strasburg, who submitted two of his instruments to Bach, who liked the mechanism but not the tone, preferring that of the clavichord. The growth of the pianoforte has been rapid since the beginning of the present century, and has now reached a point beyond which it hardly seems possible to advance.

—

melodic) at equal intervals of time. This is an illustration of the first meaning:

This, of the second:

The first may be called the essential rhythm; it is never destroyed, no matter how much it may be divided by the second or ideal rhythm; thus the essential rhythm of the following passage is 1' 2 3; the ideal rhythm varies with each measure:

Rhythm is the first essential of melody; without it we have only an aimless rising and falling of sounds. The essential rhythm is a fixed quantity which will bear very little tampering with. Witness the generally unsatisfactory effect of those compositions in which alternate measures of two and three units are used. Its pace may be changed by acceleration or retardation provided the rhythmical unit is maintained. The ideal rhythm, or rhythm of the melody, is, on the other hand, completely under the composer's control, provided that its melodic motives, phrases, etc., may be "measured" by the rhythmical units adopted as the "time signature."

form. The term "romantic" is often used as opposed to classic; but the application of "classic" is as vague as is that of "romantic." The element of time seems to be an essential of classicism, the work of a living author never being considered classic. The term romantic may be defined as roughly dividing the music written on harmonic principles from that written before the principles of harmonic combination and succession were discovered; but already the romantic school has been sub-divided into what may be called the classic-romantic and the new-romantic; but since every "new" thing must in time become "old," this last school must, when its day is past, give place to a newer romanticism.

Scale. (1) A succession of ascending or descending sounds. **Major Scale**, a series of sounds with a half-tone between 3-4 and 7-8, reckoning upward. **Minor Scale**, a series of sounds with a half-tone between 2-3 and 5-6 in the natural minor, in the Melodic Minor, 7-8, ascending. The Melodic Minor descends, like the Natural Minor; in the Harmonic Minor there are half-tones between 2-3, 5-6, and 7-8, and a tone and a half between 6 and 7. The Minor Scale sometimes descends with raised 6 and 7. Many examples may be found in Bach's music. **Chromatic Scale**, one formed wholly of half-tones. **Pentatonic Scale** [Gr., *penta*, five, *tonos*, sound], one that omits the 4 and 7. The Pentatonic Scale may be major or minor, thus:

Solmization. A method of learning to sing by the application of syllables to the scale. The earliest invention of this method of fixing the succession of sounds forming the scale in the memory is attributed to Guido of Arezzo (*ah-rets-o*), who used for this purpose the syllables *ut, re, mi, fa, sol, la*, having chanced to observe that these syllables — the first in the successive lines of a Latin hymn — were sung to six successive notes which formed a hexachord scale: C, D, E, F, G, A. There were seven hexa-

chord scales, as follows: First began on G, 1st line bass staff; this was called the hexachordum durum (hard hexachord). Second began on C, a 4th higher. Third began on F, another 4th higher; in this scale B was flat; it was called the hexachordum molle (soft hexachord). Fourth, fifth, and sixth were respectively an octave higher than the first, second, and third, and the seventh was two octaves higher than the first. The first note of every scale was called *ut* (afterward changed to *do*), therefore from its inception "*do*" was "movable." Various modifications of these syllables have at different times been used for solmization. One extensively used at one time was the practice of using only four of them, viz., *mi, fa, sol, la*. These were so arranged that *mi* always fell upon the third note in the tetrachord, for example, the scale of C was solfaed thus: —

Tetrachord. Tetrachord.

fa of the lower tetrachord to the *mi* of the upper that the expression, "mi contra *fa*," came to have a proverbial meaning. This interval, called the tritone (three tones), was by the ancient theorists stigmatized as "tritonus diabolus est." New syllables have at different times been proposed; one scheme of which the syllables were *bo, ce, di, ga, lo, ma, ni*, was called bocedization; another with *da, me, ni, po, hi, la, be*, was called damenization. The only modifications and additions to the syllables that have been permanently adopted are those used by the "Tonic Solfists," q. v.

(1) The highest development of musical form. (2) In modern use, an extended composition with several movements for pianoforte, or pianoforte in conjunction with one other instrument. A composition of this class for more than two instruments is called *trio, quartet, etc.*; for full orchestra, a *symphony*. The "form" of the sonata (see *Form*) has undergone many modifications since it was first adopted, about the beginning of the 17th century. At first it was applied indifferently to any instrumental piece, such, for example, as were commonly called "airs." Those written for the harpsichord or for viols were called "sonata da camera." Those for the organ (or frequently those for harpsichord or viols, if written in grave style), "sonata da chiesa" (church sonata). The distinguishing characteristic of the modern sonata form is the possession of two themes in different keys (see Scheme in article *Form*). The gradual growth of this binary development may be traced in the works of Kuhnau, Scarlatti, Alberti, Durante, and others. The binary form was first definitely settled by Ph. E. Bach. The only changes made since have been the immense development given to the form by Beethoven, and the adoption of other keys for the second theme.

Sound-board. A thin sheet of spruce-pine, or fir, upon which the bridge that supports the strings of the pianoforte rests. The function of the sound-board is to increase the volume of the tone, which it does by taking up the vibration of the string. There are many unsolved problems in the relation which subsists between the string and the sound-board, as to the manner in which this amplification of the sound takes place. It is impossible to form a conception of the complications in the mode of vibration of the sound-board that must take place when, for example, a full chord is struck. Yet all these complications are not only simultaneous, but they obey the changing conditions of the most rapid execution with such swiftness and certainty that not a note is lost or a tone quality obscured.

Sound-box. The body of the violin, guitar, etc. The problems as to the function of the sound-box are even more complicated than those connected with the sound-board, as a sound-box is a combination of a sound-board and an enclosed mass of air the vibrations of which have an important bearing on the quality and intensity of the tone.

The discovery of the art of equally tempering the scale lies at the foundation of modern music. Without it, the sudden excursions into remote keys would be impossible. Although we have lost something in purity of intonation, the loss is more than made up in the gain of twelve keys, all equally well in tune. Some enthusiasts, generally acousticians, express great dissatisfaction with our modern scale. A sufficient reply is, that the scale that satisfied the ears of, and made possible the music of the great writers from Bach to Beethoven, must of necessity be the best musical scale.

Tetrachord [from Gr., *tetra, chordon*]. Four strings; hence, a succession of four sounds. The tetrachord always consists of two whole tones and one half-tone. These intervals may be arranged in three ways. The oldest arrangement, called the Pythagorean tetrachord, began with the half-tone, thus:—

It is generally supposed that the original four-string lyre (called the tetrachordon) was tuned to these sounds. The addition of another tetrachord, beginning with the highest note of this one, gives the scale of the heptachord, or seven-string lyre, thus:—

This is called the scale of conjunct tetrachords, the A being the note common to both. The addition of a note below this scale, thus:—

gives the original octave scale of the lyre. This scale is the normal Greek scale, called the Dorian. It is doubtless the origin of the modern minor scale. The tetrachord known as Hucbald's had the half-tone in the middle, thus: D E F G.

The Hexachord scales (g. u.) were formed from this tetrachord by adding one letter above and one below, thus:—

In the modern major scale the half-tone lies between the third and fourth letters of the tetrachord, thus: C D E F, and the scale

consists of two of these tetrachords separated by a whole tone.

Time. (1) The division of music into portions marked by the regular return of an accent. All varieties of time are founded on two units—the Binary = 1 2, and Ternary = 1 2 3. Time signatures for the most part are formed from figures written like fractions, the upper figure giving the rhythmic units and the number of times the value of the note indicated by the lower figure occurs in the measure. Time is Simple Binary when the upper figure is 2; Simple Ternary, when the upper figure is 3. Compound times are formed by adding together two or more of the time units. When the number of accents resulting from this combination are even, it is called Compound Common time; when they are odd, Compound Triple time. Simple Duple time is indicated by this sign . As now used, it always means the value of a whole note in the measure, and is called Alla Capella time. Like all duple times, it must have but one accent in the measure, no matter how the time value of the measure may be divided. The first compound of Duple time, viz., $\frac{4}{2}$ time, is often marked , and is called Common time, under the impression that the sign is the letter C, whereas it is

the old sign for Imperfect time, viz., a broken circle, and originally meant two beats in the measure. Three beats was called Perfect time; the sign was O. With the exception of the times with 4 for the upper figure, all the compound times are multiples of the ternary unit, as $\frac{6}{2}$, $\frac{6}{4}$, $\frac{6}{8}$ —
 $\frac{12}{4}$, $\frac{12}{8}$, $\frac{12}{16}$, etc., Compound Common;
 $\frac{9}{4}$, $\frac{9}{8}$, $\frac{9}{16}$, Compound Triple. The accents in compound times are determined by the number of units in the measure. The first is the strongest, third next, the second is weak, the fourth weaker.

In Compound Triple, the second and third are both weak.

Trill, **Trillo** (It.), **Trille** (Fr.), **Triller** (Ger.). The rapid iteration of the written note and the note above, indicated by the sign, *tr*—. The trill continues to the end of the waved line. The following exhaustive account of the trill is abridged from Russell's "Embellishments of Music":—

The oldest form of trillo was a mere repetition of a tone; thus:—

The gruppo of the Italians approaches nearer the modern trill:—

Tourjee, Eben. Writer; U. S. A. B. 1834; d. 1891.

Tours, Berthold. Composer, violinist; Holland. B. 1838; d. 1897.

Tourte, F. (toort). Violin-bow maker; France. B. 1747; d. 1835.

The image shows two musical examples. The first example, labeled 'Gruppi.', consists of a treble clef staff with a common time signature. It features a trill starting on a note, followed by a series of eighth-note pairs grouped together by vertical bar lines, illustrating a 'trill in groups'. The second example, labeled 'Trillo.', shows a similar pattern but with individual eighth notes separated by short vertical stems, illustrating a continuous 'trill in single strokes'.

Another old form of embellishing a tone was called the ribattuta, thus :—

The oldest form of the modern shake was held to be derived from appoggiaturas and their resolutions.

Marpurg, Em. Bach, and Türk, all claim the shake to be a rapid succession of appoggiaturas. (*Vorschläge von oben.*)

There is no doubt, however, that the shake came quite directly from the gruppo, as explained by Caccini (1600), and the attempt to square its delivery with the appoggiatura quite overlooked the real character of the embellishment, which differed essentially from the harmonic grace.

Until the time of Beethoven, the trill beginning with upper auxiliary note was most generally used.

However, the present method of beginning with the principal tone was gradually gaining the attention of writers, even Marpurg sounding a note of warning (1755) against the "vicious innovations" of some who began the pralltriller with the principal tone. The trill is generally finished with a turn.

The after-turn is usually written out at the close of the trill, but whether or not this be so, the trill is not complete without this closing beat :—

To make the trill symmetrical with an after-turn, an additional tone is inserted, just before the close, otherwise there will be a break between the last and the next to the last beats ; thus :—

This gap between D and B is filled by the insertion of an additional principal tone, which will make the next to the last beat contain three tones (a triplet) ; thus :—

This makes a satisfactory close to a trill, the two beats (five notes) making a complete turn of quintuplet form.

Many writers call this (quintuplet) the turn of the trill, but properly speaking the after-turn of the trill is only the last beat, the triplet preceding being a real part of the trill.

From this it will be seen that the beats of a trill may be either twofold or threefold, and the smallest complete trill, according with the modern acceptance of the correct form of the embellishment, would be with two beats, five notes ; thus :—

However, in Bach, and even later—in Mozart—trills are sometimes quite consistent with correct performance which have two beats of two notes ; thus :—

In more modern music, however, this would scarcely be justified, unless marked with an appoggiatura upon the upper degree (as per rule quoted).

The rapidity of a trill is reckoned by the number of beats, not by the number of tones, sounded within a given note's time. The trill upon a long note has no positive number of beats, this being decided, in case there is no particular accompanying figure, by the character of the composition and also measurably by the ability of the interpreter. The after-turn, however, should always be played in the same time as the trill, regardless of the size of note used for its representation in the notation. If these notes be of regular size, forming part of the measure, they will be a guide as to the rapidity of the trill, the after-turn of which will constitute one beat.

The image shows a treble clef staff in common time with a '2' over the '4' in the time signature, indicating a 2-beat measure. It features a trill starting on a note, followed by a series of eighth notes, and concluding with a single eighth note (the after-turn). Below the staff, the text 'Execution :—' is written, followed by a bracketed measure of eighth notes under a curved line, representing the execution of the trill and its after-turn.

The inverted trill (*i. e.*, beginning with upper tone) completes itself without the triplet before the after-turn; thus:—

Inverted:—

Execution:—

Normal:—

tr

Execution:—

The incomplete trill has no after-turn, being the simple alternation of the principal tone with its auxiliary.

When followed by an unaccented note, the trill may be incomplete, but must not end with the auxiliary tone, for all trills must close with the principal tone; thus:—

tr

Execution:—

In this case the last beat of the trill contains three tones, thus bringing a triplet at the end of the ornament.

This is always the case with incomplete trills beginning on principal tone, therefore the smallest possible trill in modern music contains a single beat of three tones,—principal, auxiliary, principal:—

The trill of one beat can only occur on very short notes, as the pralltriller explained in previous paragraph.

Execution:—

In the old form, beginning on upper auxiliary, the smallest actual trill possible would be of four notes (two beats),

since the single twofold beat is but an appoggiatura.

Accompanied trills require a strict rhythmic conformity with the accompaniment.

If the trill be accompanied by a single note, the number of beats is somewhat optional, yet they should be in some direct ratio with the rhythm of the piece.

In duple or quadruple time, the beats should be two, four, or eight in number, on an eighth or fourth note, while on a dotted note in triple measure three beats will be found symmetrical in effect.

If the trill be accompanied by groups of notes, the number of beats must be more strictly determined. Thus, a trilled note, with four accompanying tones will require either two, four, or eight beats, according to the duration of the note:—

8 Beats:—

4 Beats:—

If the trill be accompanied by three notes, there will be either three or six beats.

3 Beats:—

6 Beats:—

When the tempo is very rapid, making it impracticable to play a trill of four beats to the group, and yet too slow for two beats only (practically making the trill, note for note, with the accompanying figure), the trill may

TRILL

100

be made with one threefold beat, followed by a fourfold turn, as follows :—

The same arrangement of the trill may be used with two beats, one of three notes and one of two notes, in case of a rapid accompaniment of three tones, thus :—

The five notes are played as a quintuplet (equal in length), against the triplet in the accompaniment.

In the older classics, a trill upon a dotted note is played according to the rule for a turn similarly placed, *i. e.*, the last tone falls upon the time of the dot.

This is much used in classic cadences, with anticipated final note.

If the following note be above the trilled tone, the turn is required, but if it be below, the turn is not necessary, the trill ending with principal tone upon the dot.

First :— tr

Execution :—

Second :— tr

Execution :—

While the turn is not essential in the second example above, yet it could readily be used, and to insure a more accurate ensemble, in case of more than one performer, the phrase would better be closed with a turn after the trill.

The more modern method of treatment of trills on dotted notes would be to trill the entire length of the tone (with dot), and consider the short tone following of the same length as the notes of the trill.

TRILL

The same rules, however, regarding the after-tone will apply here as in the older rendering.

The trill upon a tied note or on a note followed by another on same degree (without trill) requires a single lower auxiliary to form a turn immediately before the second note.

This note may be *written in, or not*, but is always required.

Execution :—

A brilliant modern device in trilled passages is the gradual quickening of the frequency of the beats, from a simple beat to a double, triple, etc.

This, with combined *crescendo* and *diminuendo*, produces an effect somewhat similar to the ancient *ribattuta*. Some composers have indicated such methods of trilling in full, thus :—

Execution :—

The chain of trills [Ger., *Trillerketten*; It., *catena di trilli*] is a succession of trilled tones ascending or descending by degrees or by skips.

If the notes be very short and in quick succession, not more than the simplest form of threefold beat can be played.

Execution :—

The after-turn need not always be used, if not written in the phrase. This will be decided largely by the rapidity of the passage.

More elaborate and less rapid chains of trills require a complete trill upon every tone, and frequently the notes are of suffi-

cient length to allow a trill of several beats, thus :—

Allegro.

Execution :—

A chain of trills without after-tones, as follows, is also authorized by such authorities as Türk, Bach, etc.

Execution :—

This manner of performance gives the accent to the upper auxiliary tone.

In extremely rapid tempo, a very effective trill chain may be used with but four tones, beginning upon the upper auxiliary and closing with a twofold after-turn.

Execution :—

Instead of the following more modern manner :—

This short form has been called the half trill, and is only used with beginning on upper auxiliary tone.

Instead of the conventional after-turn of two notes, frequent use is made (especially by modern composers) of an elaborate closing figure as a "tirata" :—

The four notes here will constitute two beats of the same rapidity as the beats of the trill.

The various beginnings of a trill may be applied to the modern manner of performance or the older way, i.e., with accent upon the principal tone or the upper auxiliary.

In the performance of a classic work the player or singer is allowed the privilege of discrimination in choice, but it may be generally stated that the modern ear will less likely be offended by the accenting of the principal tone than of the auxiliary.

But if one desires to give an exact classic rendering of Bach, or even so recent a composer as Mozart, the embellishments throughout must be consistent in their delivery and not mixed, the trills especially being made either all of modern or older pattern. In the latter case, the quaintness of some of the ancient embellishments produces very charming effects, and no amount of objecting criticism can avail against the performance as a true classic rendering.

In modern music especially there will be found various approaches to the trill, thus, each indicating the same effect :—

Written.

or,

Older manner.

Wagner (*Musikalische Ornamentik*) gives a strong and rapid introductory beat to longer trills, which may often be used with good effect; thus :—

This immediately throws the accent of the trill upon the upper auxiliary, although it begins with the principal tone, thus seemingly fulfilling the requirements of both the older and the modern rules. Ludwig Klee also uses this form of the introductory beat, but with the difference that the first beat

forms a triplet :—

This ingenious delivery of the trill is not frequently seen, but will certainly bear careful study, and is especially helpful in cases of doubt as to which of the methods of delivery to use (the old or modern).

In the case of tied notes, when the second note is a shorter one and not to be trilled, as :—

the former way of delivery used no afterturn, and consequently the only proper beginning of the trill was on the principal tone, as the trill from the upper auxiliary made a weak close.

There were many similar disadvantages attending the old manner of trilling, yet withal much of artistic force often follows its use.

The rules given should be carefully applied in all cases of doubt, when the composer has not indicated by a small note the tone upon which the trill enters.

It will be well for the student to bear in mind that the greater weight of opinion among classic reviewers and editors rests with the *older method* of trill delivery (from upper tone), and most editions of Beethoven, Mozart, Haydn, etc., having annotations, give this manner of performance as correct. It is to be remarked, however, that modern performers (*virtuosi*), who really create the style and through whom we expect the better elements of traditions to be conserved, do not, as a rule, testify in their performances to the absolute truth of this manner of trilling.

More modern composers (Chopin, Schumann, etc.) have so positively written their trills, with the accent upon the principal tone, as to have cultivated almost beyond recall, even in the greater *virtuosi*, the feeling for such a manner of performance rather than with the accented upper auxiliary.

Turn. (Abridged from Russell's "Embellishments of Music.")

The Turn partakes in its delivery somewhat of the character of the composition in which it appears, and should be played (or sung), according to Louis Koehler, broad in slow tempo, light and flowing in brighter movements, and always legato. It may be broadly divided into four classes:

I. The symbol placed over the note), or the note preceded by the embellishment written in full.

Adagio.

Moderato.

Presto.

Tuckerman, S. P. Composer, organist; U. S. A. B. 1819; d. 1890.

2. A turn between two notes on different degrees (or four small notes between).

3. A turn between two notes of similar pitch.

Adagio.

Moderato.

Presto.

4. The turn after a dotted note. The delivery of this turn is the same as the third class in its effect, since the dot is simply another way of writing a second similar note.

An exception to this fourth rule is made if the dotted note with turn directly precedes a close (possibly forming part of the cadence) and is followed by two notes of equal value leading up or down to the closing notes of the phrase.
